Reliance Gold Project 2024 Program Highlights

25 km of diamond drilling has delivered a significant high-grade gold discovery in a easily accessible productive Gold Camp

Gold deposit now over **1.5 km of trend and 1.1 km vertically** – Excellent hit statistics

2024 Drilling confirms Eagle and Imperial are the same structural envelope with Crown intersections of **7.61 gpt gold over 5.7 m & 147 gpt gold over 1 m**

Reliance Gold Project, BC Conclusions

- An outstanding New Exploration Discovery in an historically productive multi-million ounce Orogenic Gold Camp.
- Wide pervasive iron-carbonate sericite alteration, sulphidization, breccia, and antimony indicate an “Epizonal” Orogenic setting in a “brittle” structural regime – Epizonal comparables to Fosterville, Australia and Newfoundland discoveries.
- Model provides potential for a major gold system with depth continuity.
- Drilling has delivered a high percentage of significant and excellent gold intersections with associated antimony.
- Deposit extends **1.5 km laterally X 1.1 km vertically**. Eagle, Crown & Imperial confirmed as continuous structural regime
- New 2024 Discoveries at **Lower Crown** and **Lower Imperial** Zones. Expand system potential
- New parallel surficial structural trends developing as high priority drill targets
